JULIANO PERES (JP)

Quality Assurance Engineer 5+ | QA Automation | CI/CD

Torrinha, São Paulo, Brazil | juliano.a.peres@gmail.com | +55 (14) 9 97917679 | LinkedIn: linkedin.com/in/juliano-a-peres | GitHub: github.com/julianoaperes

Summary of Qualifications

- Quality Assurance Engineer with 5+ years of experience in manual and automated testing for web applications and enterprise platforms, supporting LATAM and global solutions throughout the software development lifecycle.
- Hands-on experience developing and maintaining UI automation with Cypress and JavaScript, applying Cucumber, BDD, Gherkin, and Page Object Model (POM). Contributed to automated tests in Robot Framework integrated with Java libraries.
- Experience running automated tests through GitHub Actions and performing cross-browser testing with BrowserStack. Uses AI-assisted tools to support automation development, refactoring, troubleshooting, and test scenario creation.
- Experience in functional, integration, API, system, regression, exploratory, smoke, sanity, usability, and User Acceptance Testing (UAT). Executed existing k6 scripts for load and stress testing and assessed web page performance using Lighthouse.
- Experience defining test strategies, maintaining test plans, testing REST APIs with Postman and SOAP services, validating data in MySQL and MongoDB, investigating defects, and producing reproducible bug reports.
- Experience using Azure DevOps, Jira, and Xray for test management, requirements traceability, execution tracking, and defect management, collaborating with distributed teams in Scrum and Kanban environments.
- Advanced English, developed through three years of living, studying, and working in Ireland, complemented by strong communication, analytical thinking, problem-solving, and collaboration skills.

Professional Experience

[LATAM] Quality Digital: *Mid-Level Quality Assurance Automation Analyst | Start: 04/2025 - End: 06/2026*

Cliente: *Electrolux* **|** ***Project:*** *Electrolux LATAM e-commerce ecosystem spanning 21 e-commerce sites, supported by a 7-member QA team.*

- Planned and maintained test plans for Electrolux e-commerce sites and the VTEX platform, ensuring coverage of business-critical customer journeys and requirements.
- Designed, developed, and maintained automated UI tests using Cypress, applying the Page Object Model (POM), with execution through GitHub Actions and BrowserStack, supporting faster validation cycles and reliable releases.
- Defined test strategies and maintained test plans for Electrolux's LATAM e-commerce sites and the VTEX platform, covering business-critical customer journeys and requirements.
- Leveraged AI-assisted development tools to support Cypress test automation, code analysis and refactoring, troubleshooting, and test scenario creation, improving efficiency across automation activities.
- Performed functional, integration, regression, exploratory, smoke, sanity, SEO, and performance testing, supporting product quality, user experience, and search visibility.
- Investigated defects and created reproducible bug reports with detailed steps and video/image evidence; monitored QA metrics through Excel and dashboards.
- Collaborated with developers, product owners, and QA team members throughout Scrum ceremonies, contributing to continuous improvement, risk identification, and user experience.

[GLOBAL] AB Inbev Global Tech : *Senior Quality Assurance Engineer Automation | Start: 10/2023 – End: 12/2024*

Project: *Quality assurance for two global-scale enterprise applications: a customer experience analytics platform generating NPS, CES and CSAT metrics, and a company-wide KPI management platform.*

- Planned and executed end-to-end testing throughout the sprint lifecycle, translating business requirements and acceptance criteria into test scenarios and comprehensive coverage. Also, integration, API, system, acceptance, regression, performance (load and stress), and usability testing across global enterprise applications.
- Contributed to UI test automation using Cypress, JavaScript, Cucumber, and Gherkin, applying BDD and Page Object Model (POM) to support regression coverage and maintainability.
- Defined test strategies and planned end-to-end testing for two global enterprise applications, translating business requirements and acceptance criteria into test scenarios.
- Managed test plans, test scenarios, test cases, and execution in Azure DevOps, maintaining traceability to business requirements and acceptance criteria.
- Investigated defects and created reproducible bug reports with video/image evidence; monitored QA metrics through Excel and dashboards and collaborated in Scrum ceremonies.

Caiena Technology e Design : *Junior Quality Assurance Analyst | Start: 08/2021 – End: 09/2023*

Project: HR & Payroll Web System — State Government of Paraíba, Brazil

- Test planning and execution: Supported the team's test strategy by preparing and executing functional, integration, regression, end-to-end, and exploratory tests to validate business requirements and identify defects.
- Test management and traceability: Created and maintained test cases, execution records, and defect links in Jira and Xray, ensuring traceability between requirements and test results.
- Test automation: Contributed to developing and maintaining automated tests in Robot Framework integrated with Java libraries, following established standards and reusable keyword patterns.
- BDD: Collaborated on defining Gherkin scenarios, translating acceptance criteria into clear, testable business behaviors.
- API and integration testing: Performed SOAP API testing, validating responses, error handling, and business rules across integrated services.
- Database validation: Executed basic SQL queries against MySQL databases and performed MongoDB data checks to verify data persistence and consistency.
- Defect analysis and quality reporting: Created reproducible bug reports with technical evidence and helped track test execution results and quality indicators.
- Agile collaboration: Participated in Scrum ceremonies and collaborated with developers, senior QA engineers, and business stakeholders to clarify requirements and communicate quality risks.

Languages and Certifications

- **English – Advanced**
- Spanish—Intermediate
- Portuguese – Native

- ISTQB Certified Tester Foundation Level (CTFL) — In Preparation.
- Professional Scrum Master I (PSM I) – Scrum.org | Lifetime certification | Access the credentia**.**

Education

- Professional Training in Software Quality Engineering — EBAC (British School of Creative Arts and Technology) | In Progress
- Professional Training in Java Full Stack Development—EBAC (British School of Creative Arts and Technology) | In Progress

- MBA—Business management and competitive intelligence - FATECE (Faculty of Technology, Science, and Education) | Completed
- English Language Program — Liffey College, Ireland | Completed
- Bachelor's Degree in Chemistry — Federal University of São Carlos (UFSCar) | Completed
